

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

NITRE. *f.* [*nitre*, Fr. *nitrum*, Latin.] The salt which we know at this time, under the name of *nitre* or salt-petre, is a crystalline pellucid, but somewhat whitish substance, of an acrid and bitterish taste, impressing a peculiar sense of coldness upon the tongue. This salt, though it affords, by means of fire, an acid spirit capable of dissolving almost every thing, yet manifests no sign of its containing any acid at all in its crude state. *Nitre* is of the number of those salts which are naturally blended in imperceptible particles in earths, stones, as the particles of metals in their ores. The earth from which *nitre* is made, both in Persia and the East-Indies, is a kind of yellowish marl found in the bare cliffs of the sides of hills exposed to the northern and eastern winds. From this marl

the salt is separated by water; but the crystals into which it shoots, as we receive them from the East Indies, are small, imperfect, and impure. Earths of whatever kind, moistened by the dung and excrement of animals, frequently afford *nitre* in large quantities. The earths at the bottom of pigeonhouses, and those of stables and cow-houses; all afford *nitre*, on being thrown into water and boiled. In France, where very little *nitre* is imported, they make it from the rubbish of old mortar and plaster of buildings. There is no question but a manufactory of *nitre* might be established in England to as much advantage as that of France. The nitrum or *nitre* of the ancients, is a genuine, native, and pure salt, extremely different from our *nitre*, and from all other native salts; being a fixed alkali.

QUICKSILVER. *f.* [quick and silver.] *Quicksilver*, called mercury by the chymists, is a naturally fluid mineral, and the heaviest of all known bodies next to gold, and is the more heavy and fluid, as it is more pure; its nature is so homogeneous and simple,

simple, that it is a question whether gold itself be more so: it penetrates the parts of all the other metals, renders them brittle, and in part dissolves them: it is wholly volatile in the fire, and may be driven up in vapour by a degree of heat very little greater than that of boiling water: it is the least tenacious of all bodies, and every smaller drop may be again divided by the lightest touch into a multitude of others, and is the most divisible of all bodies: the specific gravity of pure mercury is to water as 14020 to 1000; and as it is the heaviest of all fluids, it is also the coldest, and when heated the hottest: of the various ores, in which mercury is found, cinnabar is the richest and most valuable, which is extremely heavy, and of a bright and beautiful red colour: the ancients all esteemed quicksilver a poison, nor was it brought into internal use till about two hundred and twenty years ago, which was first occasioned by the shepherds, who ventured to give it their sheep to kill worms, and as they received no hurt by it, it was soon concluded, that men might take it safely: in time, the diggers in the mines, when they found it crude, swallowed it in vast quantities, in order to sell it privately, when they had voided it by stool: but too free a use of so powerful a medicine cannot be always without danger.

WATER. *f.* [*water*, Dutch; *water*, Saxon,]

1. Sir Isaac Newton defines water, when pure, to be a very fluid salt, volatile, and void of all favour or taste; and it seems to consist of small, smooth, hard, porous, spherical particles, of equal diameters, and of equal specific gravities, as Dr. Cheyne observes. Their smoothness accounts for their sliding easily over one another's surfaces; their sphericity keeps them also from touching one another in more points than one; and by both these their frictions in sliding over one another, is rendered the least possible. Their hardness accounts for the incompressibility of water, when it is free from the intermixture of air. The porosity of water is so very great, that there is at least forty times as much space as matter in it. *Quincy. Shakespeare.*

11. *Will* with a wisp, Jack with a lantern, *Will* with the wisp is of a round figure, in bigness like the flame of a candle; but sometimes broader, and like a bundle of twigs set on fire. It sometimes gives a brighter light than that of a wax-candle; at other times more obscure and of a purple colour. When viewed near at hand, it shines less than at a distance.

They wander about in the air, not far from the surface of the earth; and are more frequent in places that are unctuous, mouldy, marshy, and abounding with reeds. They haunt burying places, places of execution, and dunghills. They commonly appear in summer, and at the beginning of autumn, and are generally at the height of about six feet from the ground. They follow those that run away, and fly from those that follow them. Some that have been caught were observed to consist of a shining, viscous, and gelatinous matter, like the spawn of frogs, not hot or burning, but only shining; so that the matter seems to be phosphorus, prepared and raised from putrified plants or carcases by the heat of the sun.
